Job Application for Principal Systems / Infrastructure Architect

Dear Hiring Manager,

About Me

I am writing to express my strong interest in the Principal Systems / Infrastructure Architect position. Bringing 10+ years of mission-critical production experience co-managing low-latency infrastructure for Japannext (Japan's largest Proprietary Trading System / PTS venue) alongside a Ph.D. from Keio University in Internet Architecture and Distributed Systems (supervised by Internet Hall of Fame pioneer Prof. Jun Murai and quantum networking pioneer Prof. Rodney Van Meter), I combine rigorous physical-layer operational discipline with deep-tech systems engineering.

Professional Background & Key Strengths

Throughout my tenure at Japannext, I have architected, deployed, and stabilized mission-critical infrastructure under 99.999% up-time requirements and strict financial regulatory oversight. Key achievements include executing an end-to-end datacenter server migration with zero unplanned downtime (delivered 2 weeks ahead of schedule, unlocking 50% facility expansion capacity), implementing rack-level PDU power telemetry that improved workload power balancing by 50%, and deploying scale-out enterprise storage on Dell PowerScale (Isilon) that increased server I/O throughput by 50%. Additionally, I spearheaded the automation of executive capacity reporting and deployed automated hardware discovery and optical inventory platforms that drastically accelerated failure detection and MTTR.

Why Me?

My background uniquely bridges academic research in dynamic network topologies with large-scale bare-metal production operations. Experienced in Linux and FreeBSD kernel tuning, high-throughput TCP/UDP transport, sub-nanosecond precision timing (NPL Time & Frequency certified), AI cluster infrastructure (NVIDIA certified), and cloud-native stacks (Kubernetes, OpenStack), I thrive in high-stakes environments where nanoseconds, thermal efficiency, and five-nines reliability directly determine operational success. I look forward to bringing this battle-tested expertise to your infrastructure engineering organization.

Sincerely,

Mohamad Dikshie Fauzie
