Application for Forward Deployed Engineer (FDE)

Dear Hiring Team at Prodapt Japan GK,

About Me

I am writing to express my strong enthusiasm for the Forward Deployed Engineer (FDE) position at Prodapt Japan GK. Bringing 10+ years of production engineering leadership co-managing mission-critical systems at Japan's largest alternative trading venue (Japannext PTS) alongside a Ph.D. in Distributed Systems from Keio University (supervised by Internet Hall of Fame pioneer Prof. Jun Murai), I specialize in bridging complex client business objectives with scalable, production-grade technical execution. Based in Tokyo with fluent English and business-level Japanese proficiency, I am excited by Prodapt's mission to deploy robust, AI-powered applications directly into enterprise client workflows.

Customer Delivery & Production Track Record

Throughout my career, I have operated in high-stakes forward-deployed capacities, collaborating directly with enterprise clients, institutional broker-dealers, and global engineering partners. At Japannext, I translated ambiguous operational demands and stringent regulatory constraints into turnkey Python automation services, custom REST APIs, and automated telemetry systems that eliminated manual reporting overhead. I directed high-pressure infrastructure transformations, including zero-downtime migrations delivered two weeks ahead of schedule and enterprise storage implementations that boosted I/O throughput by 50%, instilling in me a deep commitment to delivery velocity, customer alignment, and production reliability.

Why My Expertise Fits Prodapt's FDE Mandate

In parallel with my systems leadership, I have actively developed and deployed applied AI and cloud-native solutions. I have designed and deployed end-to-end Retrieval-Augmented Generation (RAG) pipelines—optimizing document ingestion, dense vector embeddings, hybrid search, and cross-encoder reranking—alongside multi-agent task orchestration architectures with dynamic tool integration and automated evaluation benchmarks. Backed by credentials in NVIDIA AI Infrastructure, AWS Cloud, and Google Project Management, I bring hands-on experience implementing LLMOps lifecycle workflows, model evaluation frameworks, and telemetry observability (Prometheus/Grafana) in containerized environments. I welcome the opportunity to discuss how my technical depth, bilingual communication, and forward-deployed problem-solving mindset can deliver immediate value to Prodapt Japan GK and its enterprise clients.

Sincerely,

Mohamad Dikshie Fauzie
