Tokyo / APAC

Job Application for Principal Low-Latency Infrastructure Architect

Dear Hiring Team,

About Me

I am writing to express my strong interest in the Principal Low-Latency Infrastructure Architect position. Bringing 10+ years of battle-tested production leadership co-managing physical, network, and storage infrastructure for Japannext (Japan's largest Proprietary Trading System / PTS venue) alongside a Ph.D. from Keio University in Distributed Systems (supervised by Internet Hall of Fame founder Prof. Jun Murai and quantum pioneer Prof. Rodney Van Meter), I offer a rare synthesis of physical-layer operational discipline, sub-nanosecond precision timing, and low-latency packet systems engineering.

Exchange Production Track Record

Throughout my decade-long tenure at Japannext, I have operated at the core of high-stakes electronic trading governed under strict Japan Financial Services Agency (FSA) compliance and 99.999% availability requirements. Key production accomplishments include executing an end-to-end datacenter server migration with zero unplanned downtime (delivered 2 weeks ahead of schedule, expanding low-latency matching engine capacity by 50%), implementing rack-level PDU power telemetry that improved workload power balancing by 50% (eliminating breaker-trip risks during extreme market volatility), and scaling Dell PowerScale (Isilon) enterprise parallel storage to deliver a 50% throughput increase for multi-petabyte daily tick data logging, order-book replay, and quantitative backtesting.

Why My Expertise Fits Your Trading Infrastructure

In proprietary trading and market making, microsecond and nanosecond advantages directly govern profitability and risk. My technical capabilities directly align with your low-latency infrastructure imperatives: sub-nanosecond clock synchronization (NPL UK certified in Time & Frequency Metrology, IEEE 1588v2 PTP, SyncE, White Rabbit for FSA/MiFID II clock drift compliance); line-rate hardware acceleration and kernel bypass (Stanford NetFPGA, Solarflare Onload/EF_VI, DPDK); exchange colocation and optical physical-layer metrology (Equinix TY3, ATTokyo CC2); and mathematical rigor from an ITB Physics degree and NYIF Financial Risk Management certification. I welcome the opportunity to discuss how my expertise can strengthen your firm's competitive trading edge.

Sincerely,

Mohamad Dikshie Fauzie
